Claims

1. A cement composition comprising 100 parts by weight of magnesium oxide comprising 5 to 25 % by weight of at least any one of silicic acid, alumina and iron oxide, 3 to 35 parts by weight of a phosphate, 2 to 30 parts by weight of gypsum and 0.005 to 7 parts by weight of an oxycarboxylic acid or a ketocarboxylic acid.

2. A cement composition, obtained by adding at least any one of an anhydrous phosphate, gypsum and an oxycarboxylic acid or a ketocarboxylic acid separately to a crushed product of a solid-liquid primarily being composed of magnesium silicate comprising at least any one of silicic acid, alumina and iron oxide as the fused component, produced by fusing part of a composition having the same chemical composition as the cement composition as defined in claim 1.

3. A cement composition, obtained by adding at least any one of an anhydrous phosphate, gypsum and an oxycarboxylic acid or a ketocarboxylic acid separately to a crushed product of a solid-liquid primarily being composed of magnesium aluminate comprising at least any one of silicic acid, alumina and iron oxide as the fused component, produced by fusing part of a composition

having the same chemical composition as the cement composition as defined in claim 1.

4. A cement composition comprising 100 parts by weight of a soil stabilizer being the cement composition as defined in claim 1 and 0.5 to 20 parts by weight of calcium aluminate.

5. A cement composition comprising 100 parts by weight of a soil stabilizer being the cement composition as defined in claim 1 and 3 to 30 parts by weight of alumina.

6. A cement composition comprising 100 parts by weight of a soil stabilizer being the cement composition as defined in claim 1 and 3 to 30 parts by weight of aluminium silicate.

7. A cement composition comprising 100 parts by weight of a soil stabilizer being the cement composition as defined in claim 1 and 0.001 to 5 parts by weight of an inorganic coagulant or a high polymeric coagulant.
